

## Custom & Travel Cages

This Travel Cage was made to the clients' vehicles dimensions to allow for a drop down door between the front seats. More photos of this cage are found in our New Products section.

This unit was custom made to roll with the ease of a retractable handle. Only the front door panel contains solid anodized aluminum rod, the rest of the unit is polycarbonate sheeting.

This cage was custom built for a client in Arizona. They have a 5'd x 6'w x 7'h Guardian inside their home where they put all 4 feeding centers; they also ordered a taller door for easier access. Both units are only 3-sided and use the home as the fourth side, with specialized C-channel to attach the cages to the house.

This is standing inside the 5'd x 6'w x 7'h looking out their sliding door to the exterior cage which is also a Guardian, but is 7'd x 7'w x 7'h. We installed a center pillar for added support for the 7' top span and branch configuration. Their pets are able to go outside by opening the sliding door and are totally protected.
